

mobIDEOS integrated with Milestone

Written by Neil Sutton, on Tue-July-2009

mobIDEOS, a provider of mobile access to video surveillance and remote video camera monitoring, has announced that its MobileCamViewer is now integrated into Milestone Systems' XProtect Corporate NVR solution.

The XProtect Corporate consists of several components that are designed for optimal compatibility with modern IT infrastructures and network architectures. The distributed server architecture lets customers place recording servers wherever they are needed. This optimizes network traffic by isolating heavy video traffic into segments and by only allowing the necessary management and playback traffic between cameras and users. MobileCamViewer will add mobility and increased flexibility to this robust solution.

MobileCamViewer offers secure, reliable carrier-grade remote monitoring and video surveillance solutions that provide instant business intelligence and situational awareness and readiness for:

- Executives & Managers
- Loss Prevention & Security Personnel
- Police & First-Responders
